**Introduction**

- Worked with the OVC Program Specialist within the Office of Global Health and HIV which oversees programming and training of Peace Corps Volunteers working in the health sector
- Conducted a comprehensive analysis of all of the programs serving OVC over the past 4 years

**Objective of the Study**

To evaluate whether the OVC-directed services Peace Corps Volunteers are providing in the field actually align with both the OVC indicator criteria and programmatic goals of the agency.

**Methods**

- Analysis Tools Used: Excel, NVivo, Tableau
- Coded activity descriptions into categories based on key research questions
- Summarized coded data and created visualizations (shown in Results)

**Results**

**Activities:**

**Beneficiaries:**

**Duration of activities:**

**Work with orphanages:**

**Conclusions**

**Activities:**

- Relatively little work with orphanages, primarily in South Africa
- Still too many one time activities

**Beneficiaries:**

- Successful emphasis on youth and caregivers
- Many activities targeting non-OVC specific populations
- General data quality issues

**Next Steps**

- Adjust reporting tool based on data quality findings
- Work with Volunteers to ensure their activities are more in line with indicator criteria and agency goals
- Future interns or program specialists may use this research method format to review other indicators or project areas

**Acknowledgements**

I would like to thank the following organizations and advisors for their assistance during this internship:

- Princeton Health Grand Challenge
- Peace Corps OGH
- Salewa Oyelaran (OGHH)
