Introduction
- PubMed is an influential search engine for biomedical literature
- Launched in 1996, PubMed records mostly date back to 1966
- Many reviews and research articles begin with a PubMed search, making it an essential source of knowledge

Objective of the Study
How have ‘Chinese Hospitals’ appeared in the scientific literature over time?

Methods
- Literature review on PubMed
- Annotated bibliography of articles
- Categorize articles and catalog in Excel with keywords and author information

Acknowledgements
Thank you to Professor Bian for guiding and advising me throughout the summer. Thank you to the Center for Health and Wellbeing for supporting and funding this work.

Results
- PubMed: 366 articles found, 1981-2020
- Annotated bibliography completed from 1981-2015

Discussion
- Articles regarding Chinese hospitals have increased in prevalence over time, and will likely continue to do so
- Content of articles varies
  - Majority of articles discuss biomedical research, but many are on non-medical subjects

Questions
- Which institutions and/or geographic locations are represented on PubMed most often?
- How will the content of articles on ‘Chinese Hospitals’ change in the future?
- Which articles are not found by a literature review of ‘Chinese hospitals’?

Conclusion
Research on ‘Chinese hospitals’ represent a substantial body of information about medical and non-medical topics in the modern day.
