Introduction
• The U.S. Peace Corps is a U.S. agency with volunteers in over 60 countries working in health, education, agriculture, community economic development, environment, and youth and development sectors.

*DREAMS (Determined, Resilient, Empowered, AIDS-free, Mentored, and Safe) is a public-private partnership that aims to reduce HIV risk in adolescent girls and young women.

Objective of Internship
I was hoping to gain exposure to the field of global health and develop qualitative research skills.

Health Promotion breakdown (Health Indicators)
- HIV, Health Development, Gender
- Literacy, English learning
- Health education, strategies for coping
- Food security, farming
- Mental health, stress
- Family planning, reproductive health
- Resource referral

Reflection
• Because DREAMS focuses on HIV risk reduction in adolescent girls and young women and aims to have recurring contacts with beneficiaries, this analysis shows Peace Corps volunteers are involved in activities that align with the DREAMS program.

Looking ahead
This internship solidified my interest in continuing on to work or pursue further studies in the field of public health.

Questions
• How can we better take into account the personal perspectives and wants of those being target with global health programs and initiatives?
• What can we learn about improving access to health care and ARTs from the way in which COVID-19 and lock-downs has effected health care?

Conclusion
I feel that I have a much better understanding of how the Peace Corps along with other government agencies function, I also feel like I have a better understanding of work in the field of global health.

Acknowledgements
Thank you to the U.S. Peace Corps OGHH for hosting me for an internship this summer. A special thank you to my supervisors Shelley Smith and Peggy Defay. Thank you also to the Center for Health and Well being and to the Princeton Global Health and Health Policy Internship Program for funding the internship.
